ABOUT ME

Informatics Engineering student with strong interest in Software Engineering, Web Development, and Mobile Application Development. Experienced in developing responsive websites, mobile-based information systems, and IoT monitoring projects. Familiar with frontend development, backend integration, REST API concepts, database management, and software system design. Passionate about building real-world digital solutions and continuously improving technical skills through personal and academic projects.

PROJECT EXPERIENCE

01

Campus Lost Tracker — Mobile Lost & Found Application

Jan 2026 – Present

Software Engineering Project

- Developed a mobile-based lost and found application using Flutter and REST API architecture.
- Implemented reporting, smart matching, real-time notifications, chat, and item verification features.
- Designed relational database structure and backend integration using MySQL and PHP.

Technologies: Flutter PHP REST API MySQL

02

Isle Tours — Tourism Information Website

Mar 2025 – Jun 2025

Web Information System Project

- Developed a tourism information website focused on destinations in the Riau Islands region.
- Designed user-friendly interfaces and organized tourism content for better accessibility.

Technologies: HTML CSS JavaScript

EDUCATION

Universitas Maritim Raja Ali Haji

Sep 2023 – Present

Bachelor of Informatics Engineering

- Focused on software engineering, web development, mobile application development, and system design.
- Actively involved in academic and personal software development projects.

SMAN 18 Bekasi

July 2019 – May 2022

Senior High School

- Developed analytical, communication, and problem-solving skills through social science studies.
- Participated in collaborative learning and academic activities.
